PRIYABRATA PUROHIT

Senior AI Engineer | Agentic AI, RAG & LLMs | Multi-Agent Systems

Bengaluru, India, relocating to the UAE (Dubai / Abu Dhabi) | Open to Visa Sponsorship | 1-Month Notice

PROFESSIONAL SUMMARY

Agentic AI Engineer with 8.5+ years across Adobe, FactSet and Cognizant, including 3+ years designing, building and deploying production multi-agent and RAG systems end to end. Build autonomous AI agents, multi-agent orchestration, tool calling via MCP, and advanced multi-source RAG on Azure AI Foundry, Azure AI Search, GPT and Claude, with production conversational agents in daily enterprise use. Strong in secure AI architecture (data-source isolation, access-controlled retrieval, trace-based auditability) and in LLM evaluation and MLOps (CI/CD quality gates, regression testing, cost and latency metrics). Two-time Adobe Innovation Award winner, certified in Agentic AI (Johns Hopkins, 2026), invited speaker at INFORMS 2025 Singapore, with a US master's degree (Northeastern University).

CAREER HIGHLIGHTS

- **2-time Innovation Award winner at Adobe:** plus spot bonuses for AI and data initiatives.
- **Prototype to production:** built and deployed an enterprise AI agent (Azure AI Foundry, GPT and Claude, Slack, RAG over SharePoint) now in day-to-day live use.
- **3-source unified RAG index:** consolidated wiki, PDF and PowerPoint content and Databricks tables into one Azure AI Search index, exposed as isolated, access-controlled MCP servers.
- **8 production agents under quality gates:** created a rubric-based evaluation framework with hard pass/fail gates, backed by an automated CI/CD evaluation pipeline.
- **Hours saved every week:** serverless PowerPoint-generation agent removed manual deck-building across teams.
- **30% wider data access:** enterprise Power BI solutions increased data accessibility across teams.
- **15% faster data feeds and 30% faster analysis:** delivered at FactSet while leading a team of 4.
- **INFORMS 2025 Singapore and Johns Hopkins:** invited speaker and publication; Certificate in Agentic AI (2026).

CORE COMPETENCIES

Agentic AI & LLMs: Production AI Agents | Multi-Agent Orchestration | Agent-to-Agent Routing | MCP Tool Orchestration | Multi-Source RAG and Grounding | Prompt Engineering | Structured Outputs and Schema Validation | Enterprise Application Integration

Secure & Responsible AI: Data-Source Isolation | Access-Controlled Retrieval | Auditability and Tracing | AI Guardrails | Hallucination and Grounding-Gap Detection | Enterprise Data Governance

Evaluation & MLOps: LLM Evaluation and Benchmarking | Prompt Regression Testing | Automated Evaluation Pipelines | CI/CD Quality Gates | Agent Cost and Behaviour Metrics | Production Troubleshooting

AI & LLM Stack: LangGraph | LangChain | Azure AI Foundry | Azure AI Search | GPT | Claude | MCP | RAGAS | DeepEval | Langfuse

Engineering & Data: Python | Azure Functions | REST (Uvicorn) | GitHub Actions | Playwright | Docker | SQL / T-SQL | Databricks | Azure SQL | Blob Storage | Power BI | Tableau | Predictive Modelling

Leadership & Delivery: Team Leadership | Mentoring | U.S. and Global Stakeholder Management | Full Lifecycle Delivery | Documentation and Runbooks

PROFESSIONAL EXPERIENCE

Senior Analyst (AI Engineer) — Dec 2022 – Present

Adobe | Bengaluru, India

- **Enterprise AI agent:** Built and deployed a production AI agent on Azure AI Foundry (Python, served via Uvicorn), integrated with Slack and powered by GPT and Claude, with multi-document RAG ingestion from SharePoint.
- **Unified RAG and MCP:** Designed an Azure AI Search index across chunked wiki, Blob Storage PDFs and PowerPoints, and Databricks tables embedded with a Foundry embedding model. Exposed each source as a separate MCP server in an Azure agent hub, with data-source isolation and prompt-based routing to the correct grounded source.
- **Multi-agent orchestration:** Built agents on a multi-agent platform and contributed to its orchestration layer, dispatching queries across domain agents using per-agent purpose definitions, on a runtime handling prompt assembly, tool manifests and tracing.
- **Serverless automation:** Deployed a PowerPoint-generation agent (Azure Function App) as a Foundry agent, integrating internal data sources to remove manual deck-building.
- **Evaluation framework:** Created a rubric-based evaluation framework with hard pass/fail gates across the production agent fleet, and benchmarked competing prompting and retrieval strategies to select the production configuration.
- **Automated CI/CD evaluation:** Built a phased pipeline: trace-derived test bank, scheduled GitHub Actions runs and Playwright UI testing against the live agent, using RAGAS, DeepEval and Langfuse to set repeatable quality gates.

- **Observability and cost:** Analysed live Langfuse traces and user feedback, compared prompt versions across Dev and Production to catch regressions before release, and tracked response time, token use and prompt-cache reuse against targets.
- **Production risk resolution:** Detected and fixed two grounding risks through trace-based auditability: a prompt and search-index mismatch, and an agent prompt that referenced a capability with no backing data source.
- **Predictive analytics:** Led delivery of risk prediction models (Python, SQL, Databricks) that flag at-risk enterprise accounts ahead of escalation.
- **Documentation and mentoring:** Authored per-agent purpose specifications, architecture and repo documentation for handoff, worked with U.S. and global stakeholders to drive adoption, and mentored juniors and interns.

Product Specialist **Jun 2020 – Dec 2022**

FactSet | Hyderabad, India

- **Team leadership:** Led and mentored a team of 4 on the CTS financial data product, with technical guidance in SQL and Python.
- **Data quality:** Strengthened data standards and quality controls across M&A, PE/VC and Supply Chain datasets to speed up data-feed processing.
- **Analysis workflows:** Used T-SQL and MSSQL Server to accelerate analysis workflows, and built Power BI dashboards for financial-services stakeholders.

Business Analyst **May 2018 – Jun 2020**

Cognizant (Google Maps client) | Hyderabad, India

- **Reporting:** Delivered SQL and Tableau reporting on KPIs and operational metrics across multiple markets, turning stakeholder requirements into recurring cross-functional reports.

IT Applications Analyst (Co-op) **Jan 2016 – Jun 2016**

EnerNOC | Boston, MA, USA

- **ETL and reporting:** Performed ETL, deployed SSIS packages to MS SQL Server and built NetSuite reports across payments, purchase orders, invoices and customer data.

EDUCATION

MS in Engineering Management, Concentration: Information Systems **Sep 2014 – Dec 2016**

Northeastern University, Boston,USA

Bachelor of Technology, Electronics & Communication Engineering **2010 – 2014**

Vellore Institute of Technology, Vellore, India

CERTIFICATIONS & PUBLICATIONS

- **Certificate Program in Agentic AI:** Johns Hopkins University, 2026.
- **Invited Speaker and Publication, INFORMS 2025, Singapore:** "Leveraging Generative AI for Automated Dashboard Design and Insights Generation".
- **Generative AI Fundamentals; Data Science Methodology:** IBM.
- **SQL (Intermediate):** HackerRank.
